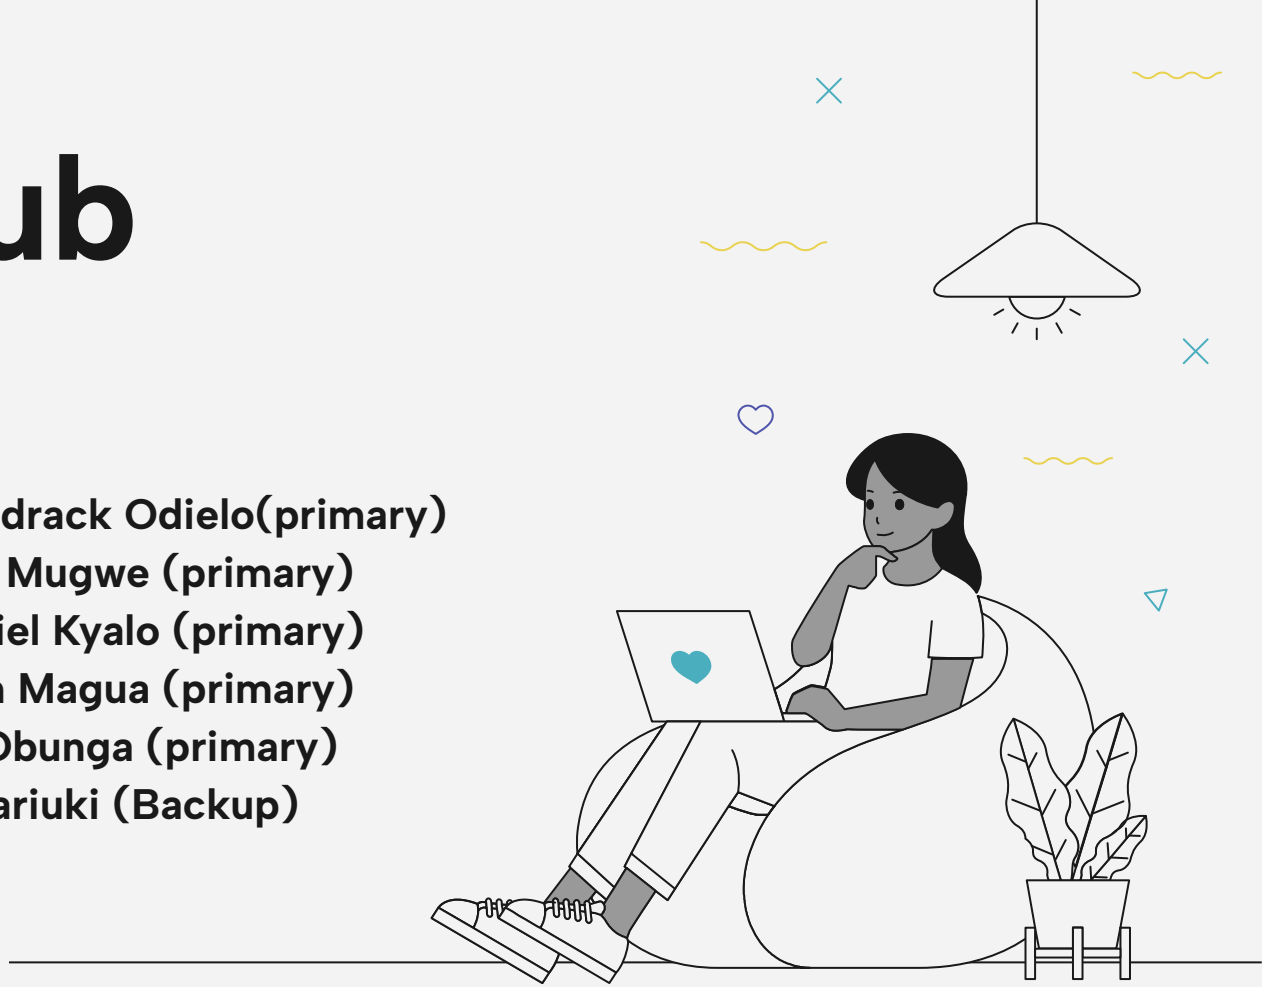
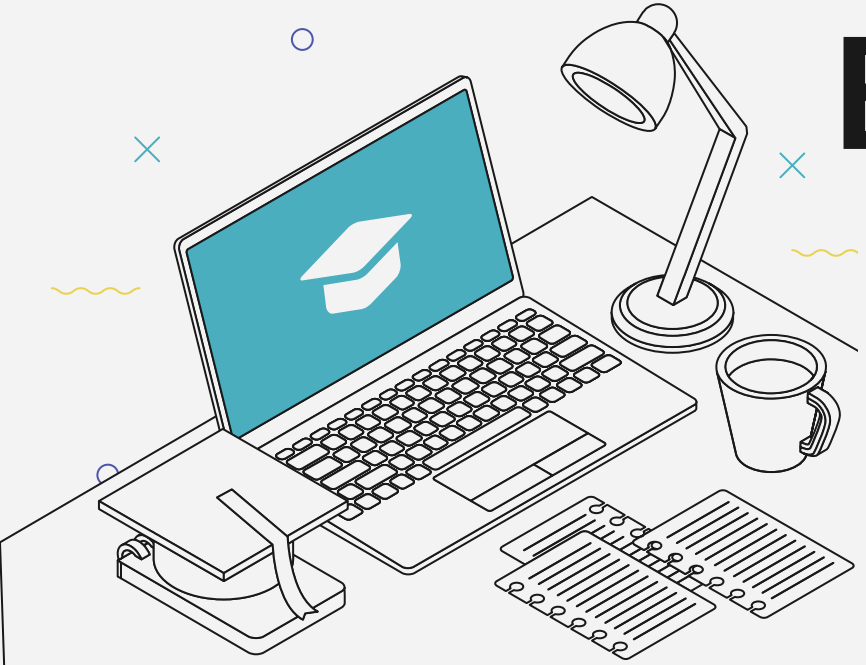
1. Product Manager- Shadrack Odielo(primary)
2. UX Researcher - Rose Mugwe (primary)
3. UI/UX Designer- Gabriel Kyalo (primary)
4. Project Manager-Ruth Magua (primary)
5. Data Analyst - Caleb Obunga (primary)
6. Data Analyst -Juliet Kariuki (Backup)





GCGO: EDUCATION

In Kenyan schools, there's a notable disparity in education quality, resulting in unequal opportunities for students. Outdated methods and resource limitations hinder their development. Bridging this gap is essential for creating a more equitable education system in Kenya.

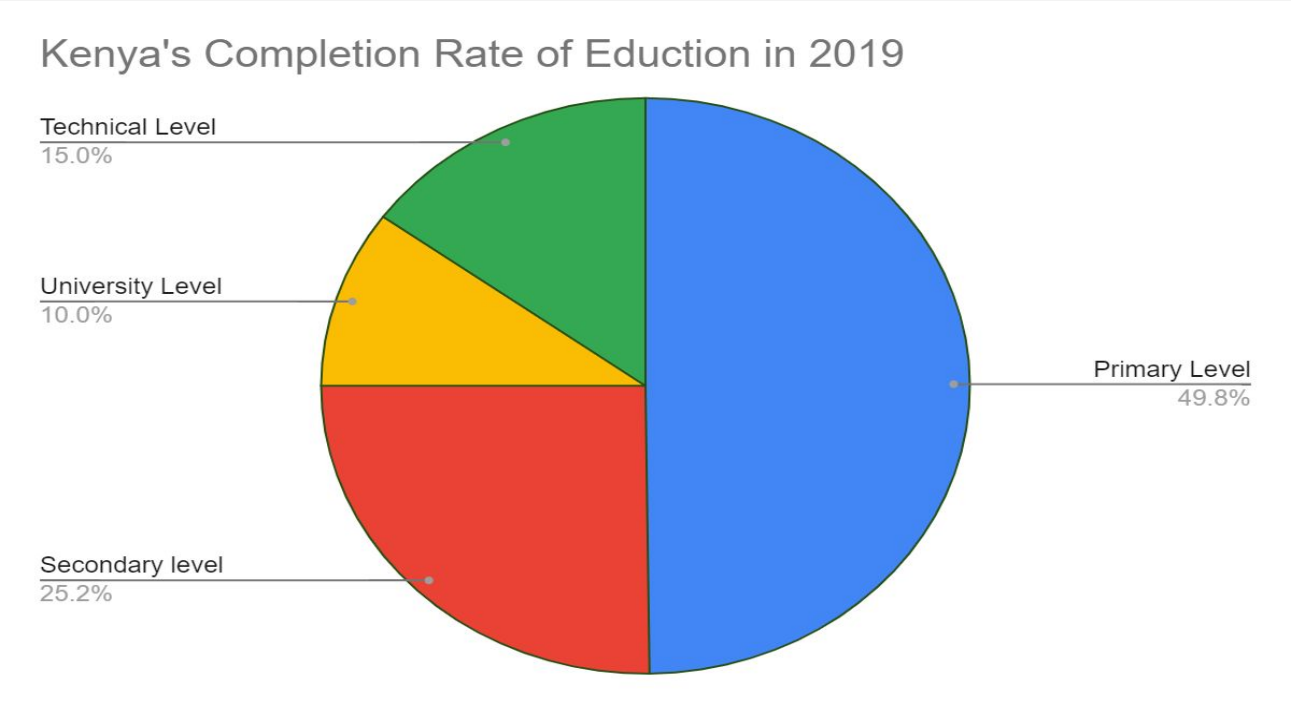
User Persona:

Name: Linet Helen
Occupation/Role: A form 4 student
General Information: Lives in the village, she is ambitious and loves studying, she enjoys doing art during her free time.
Demographics: 17 yrs old, humble background, female
Personal Story: Linet want to revise for her KCSE during the weekend and after school. However, she cannot access the curriculum books or the teachers of her problematic subjects after school closes at 6pm.
Pain points: Frustration i.e she wants to study but can't.
Walking long distances to borrow books. Copy and pasting notes takes up too much time.

Statistics:

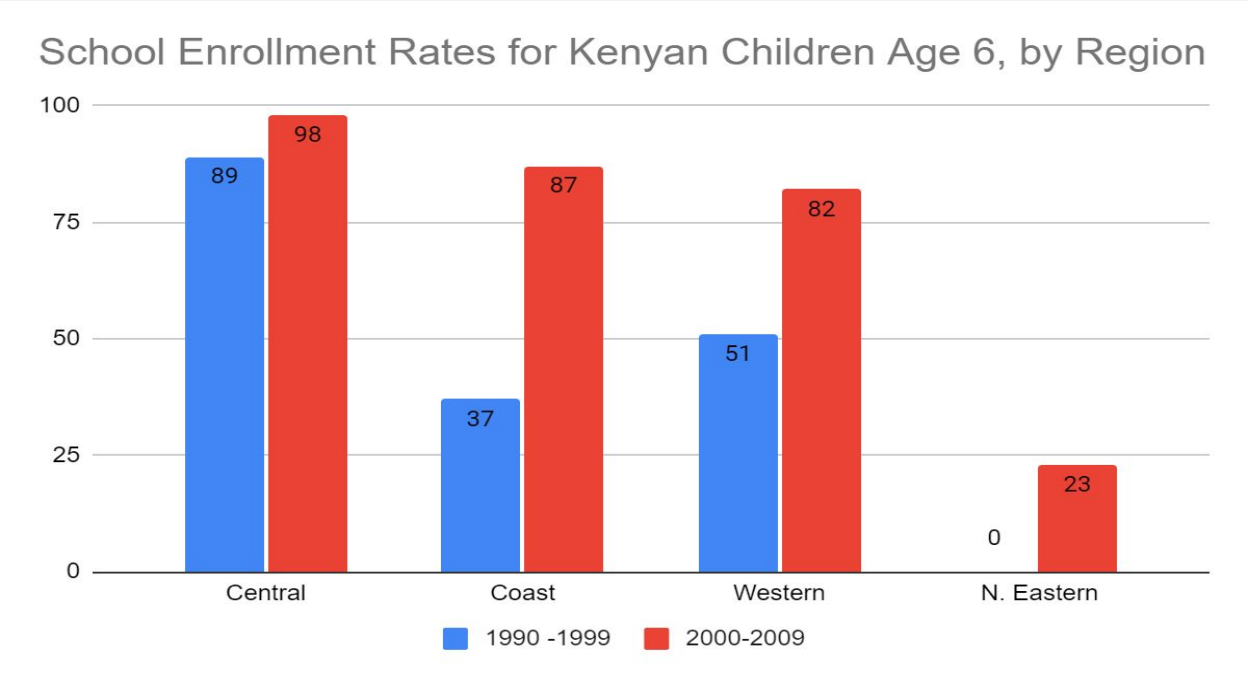
This graph shows the completion rate of education in Kenya in the various education levels in 2019.

According to UNICEF, teacher to pupil ratio still remains high in some counties. For instance, in Turkana, the ratio is 1:77 while the average ratio as per the education sector report stands at 1:40.

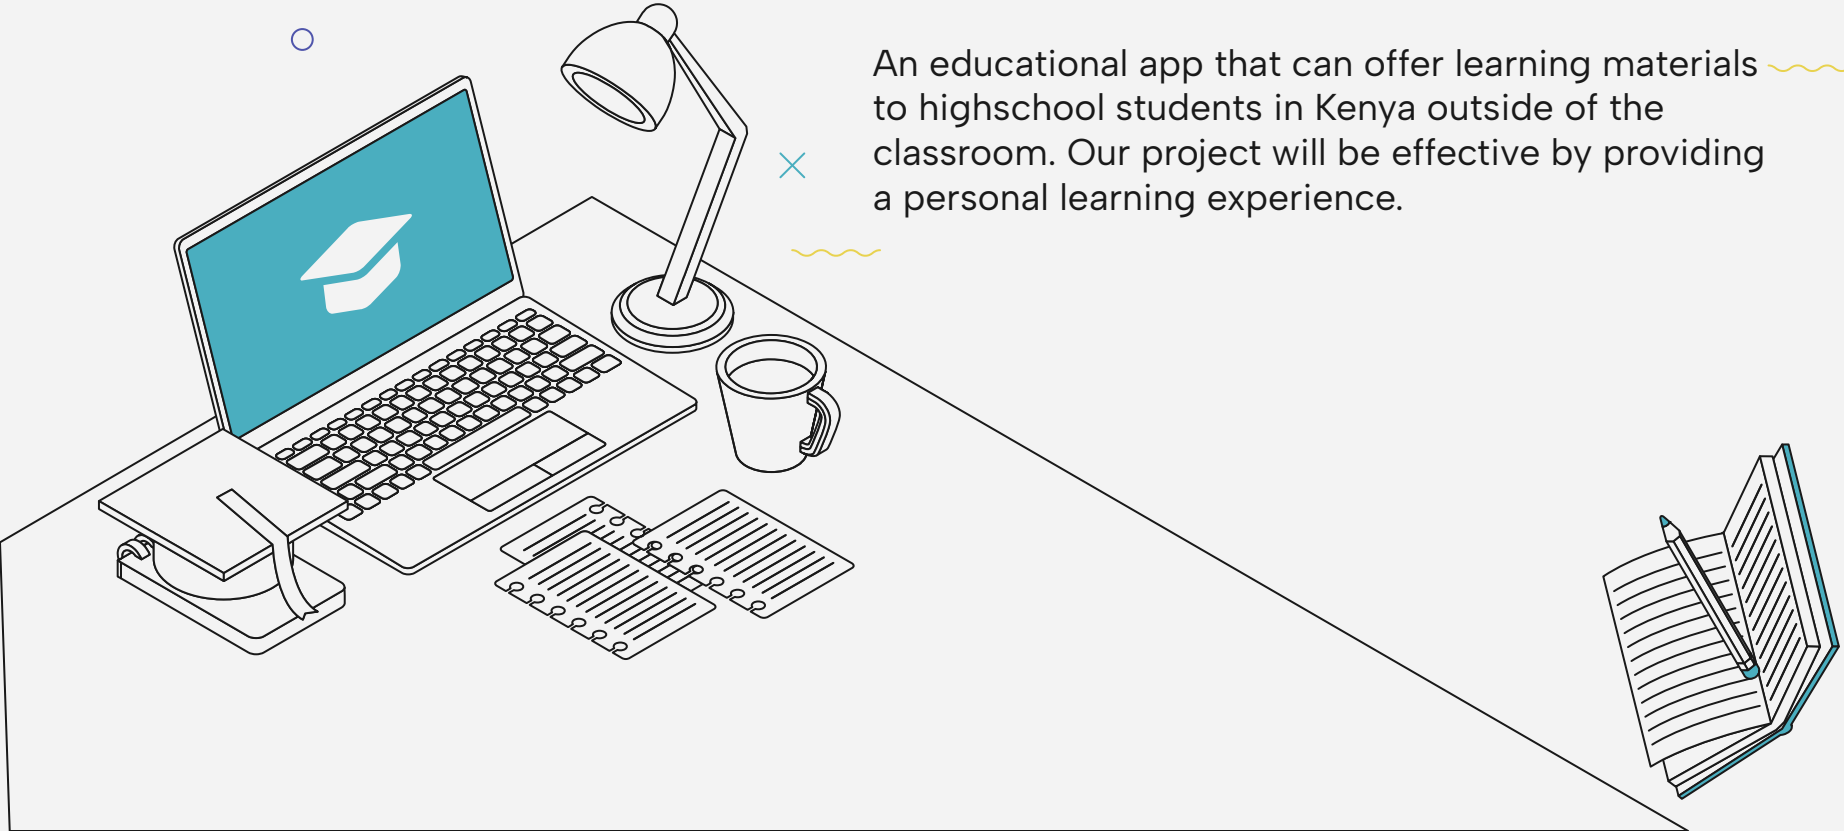


Statistics 2:

This graph shows the statistics of school enrollment rates for Kenyan children age 6 by region.
As per UNICEF, before the COVID-19 pandemic, school enrollment rates in primary and secondary schools stood at 93% and 53% respectively.



What is our proposed solution?

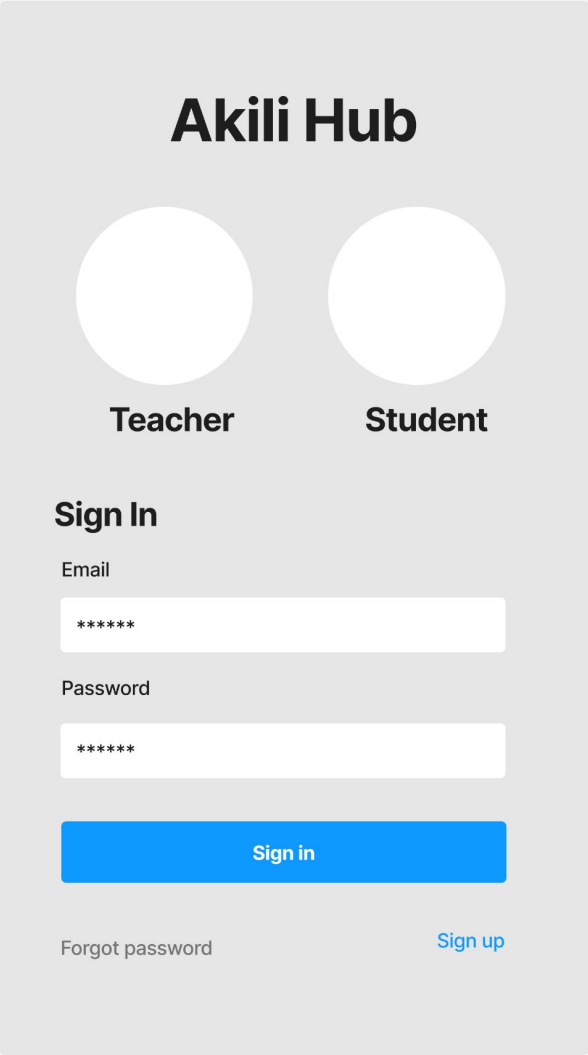


An educational app that can offer learning materials to highschool students in Kenya outside of the classroom. Our project will be effective by providing a personal learning experience.

Product wireframes:

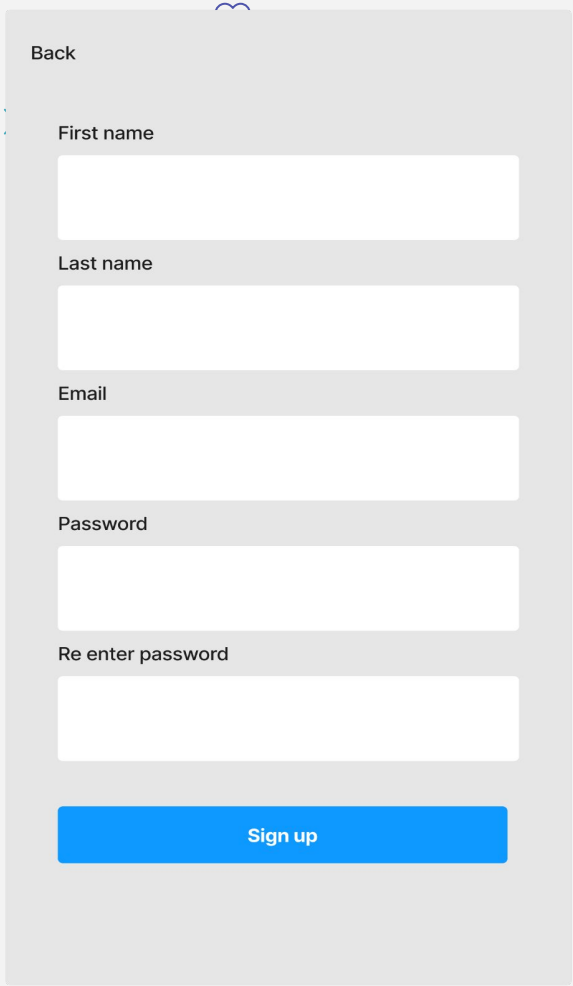
1. Welcome Screen

- This is the first page a user sees when they open the app.
- It shows the logo, name and the app's mission.
- An element on the screen is the button named 'enter' when clicked, it takes you to the next page which is the log-in/sign-up.



2. Sign in

- This is the second page the user sees after pressing ‘enter’ from the first page.
- It has 2 profiles, one for students and another for teachers but for now, we will focus on the students
- Once the student selects the ‘students’ profile, they will be required to sign in to move on to the next step.
- The navigation indicator is the sign-in which also acts as an element as well to take the user to the next step when clicked.

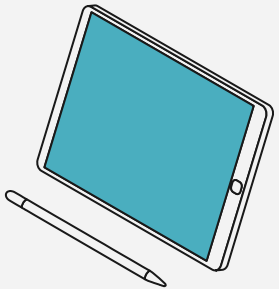


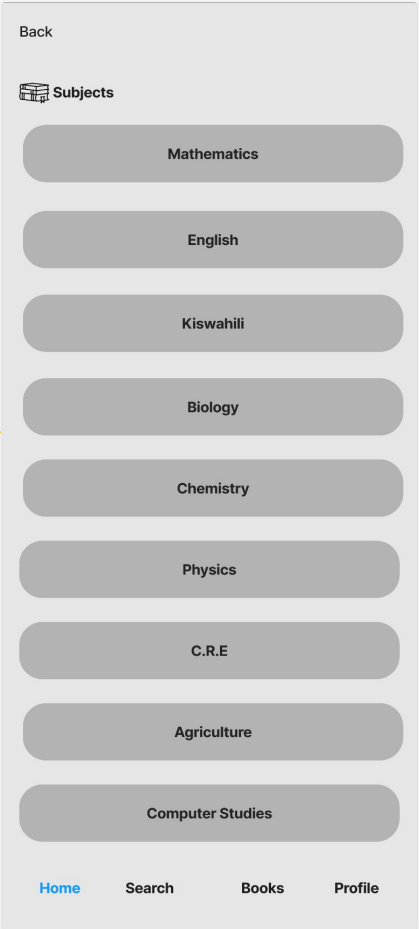
3. Sign up

- Upon the event that a student isn't a returning user, they will be required to register and input their details to move on to the next step.
- The navigation indicator is the back selector at the top left of the screen which when clicked takes you back to the log-in page.
- The element is the signup button which takes you to the next page which is the home page.

4. Forgot password

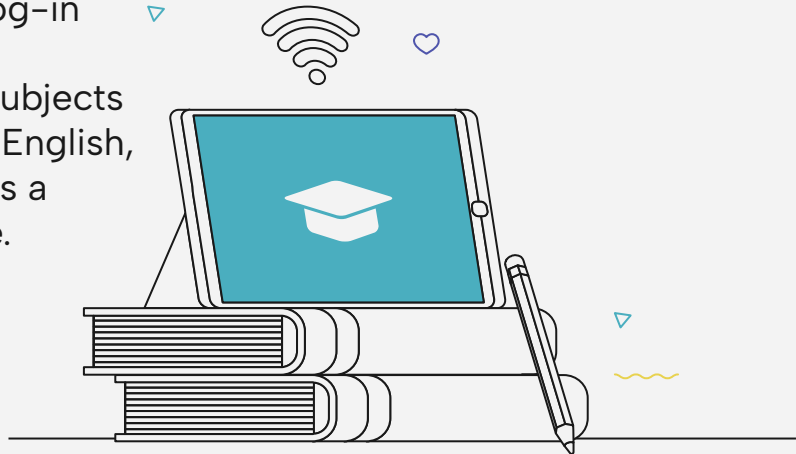
- If the user has forgotten their password they will be required to select the forgot password option in the log-in page.
- They will be required to input their email and instructions will be sent to their device on how to log in

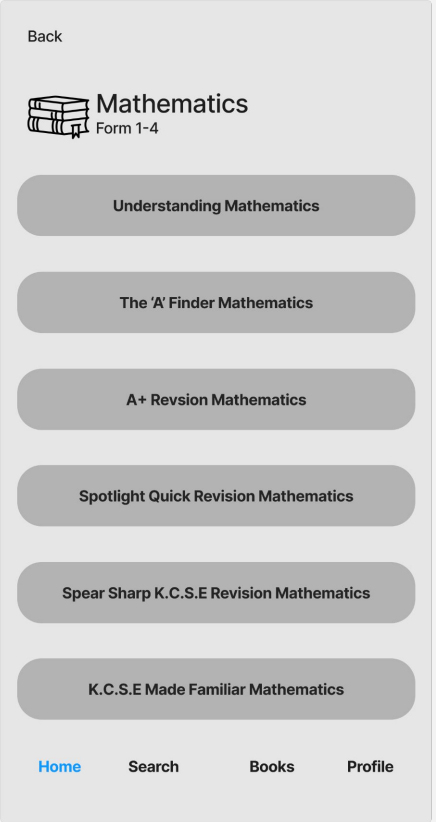




5. Home Page

- After a successful log-in, the user will meet a varied selection of subjects.
- The user can choose any of the subjects listed to learn about.
- The navigation indicator is the back selector at the top left of the screen which when clicked takes you back to the log-in page.
- The element is on the subjects listed i.e. Mathematics, English, Kiswahili etc that acts as a button to the next page.

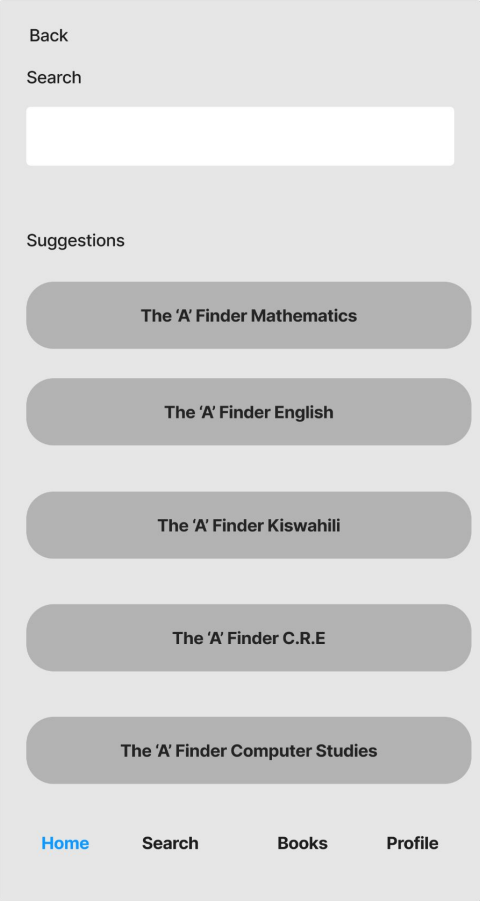




6. Book Selection

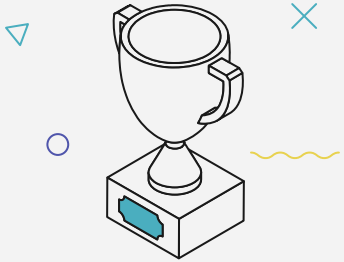
- When the user selects their preferred subject to study they will be taken to the next page which shows a series of books to study from.
- In this case, we use Mathematics as the preferred subject of study and we can see the various books listed to study from.
- The navigation indicator is the back selector at the top left of the screen which when clicked takes you back to the log-in page.
- The element here is the books listed i.e. Understanding Mathematics, A+ Revision etc. that acts as a button which will take the user to the next page.

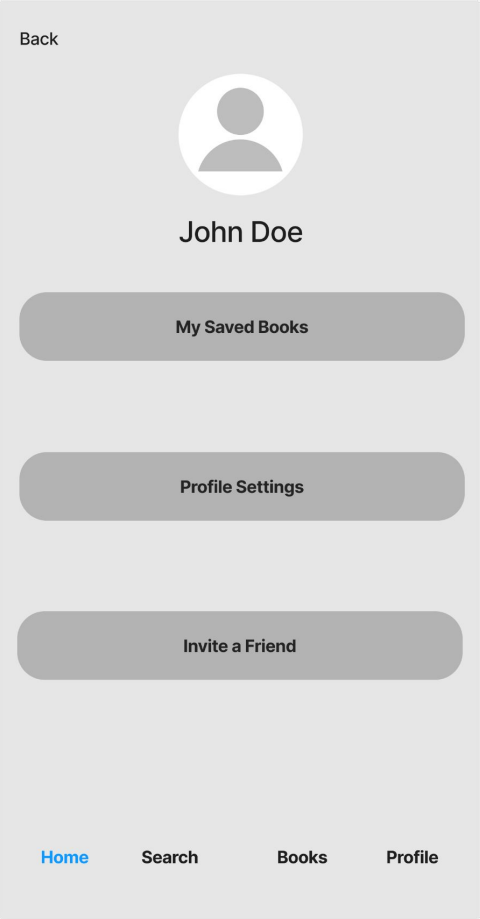
Back
The 'A' Finder Mathematics
Topics
Lorem Ipsum Lorem Ipsum Lorem Ipsum



8. Search Page

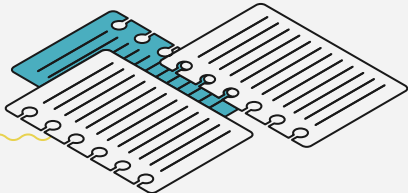
- The user can search for a specific book that they are looking for.
- The page also has some recommended books for the user.
- The navigation indicator is the back selector at the top left of the screen which when clicked takes you back to the log-in page.
- The element here is the search box that allows the user to input characters to search for the specific book.
- Another element here is the books listed i.e. the 'A' Finder Mathematics. etc. which acts as a button which will take the user to the next page.



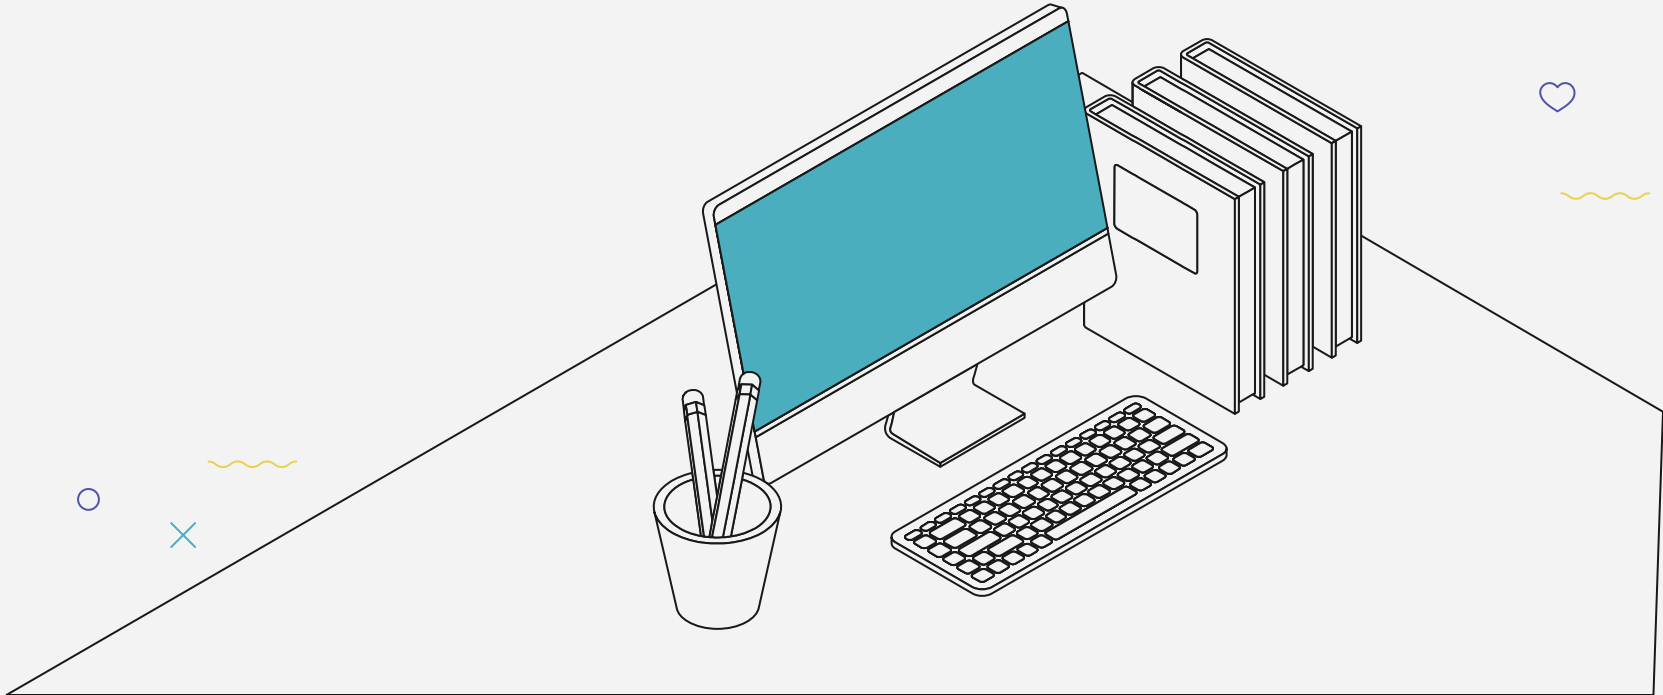


9. Profile

- The user can see their saved books for easier access.
- The user can also customize their profile by using ‘profile settings’.
- The navigation indicator is the back selector at the top left of the screen which when clicked takes you back to the log-in page.
- The element here is the options listed that act as a button which will take the user to the next page.

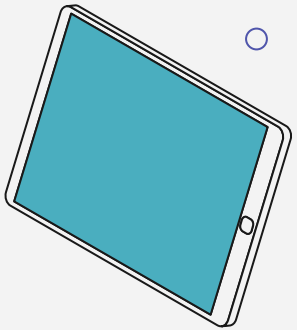


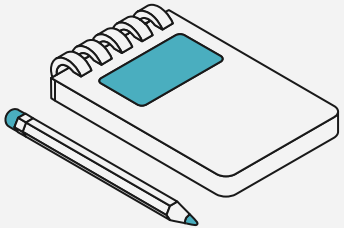
Needs & Pain Points :



Needs:

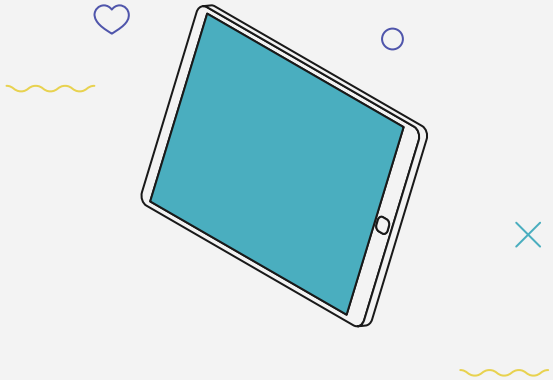
- Equal opportunities for all students.
- Access to modern educational technology.
- Updated teaching methods and resources.
- Improved infrastructure in schools.
- Increased investment in the education sector.
- Training and support for teachers.

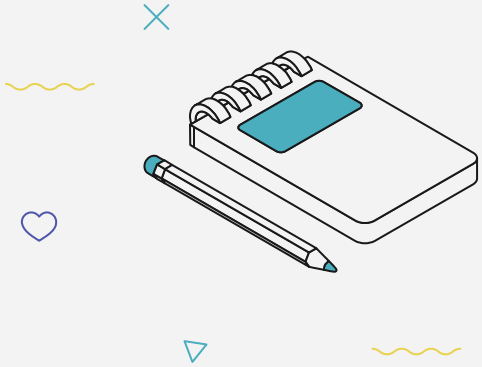




Pain points :

- Educational inequality.
- Outdated teaching methods.
- Inadequate access to modern technology.
- Inequitable educational opportunities.
- Infrastructure challenges.
- Limited resources.
- Teacher training and support needs.



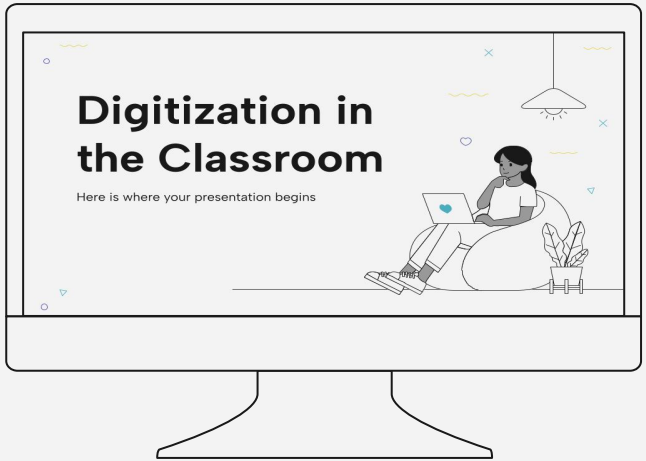


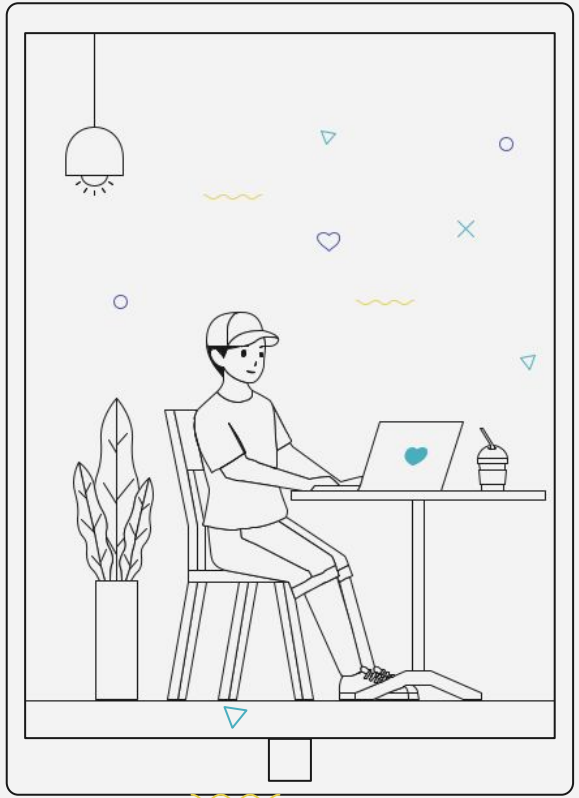
Recommendations from user interviews

- Make it available offline- we will take action on it
- Support for feature phones - it is impractical since only smartphones support mobile apps
- Include videos - we may take action on it later,but for now we focus on functionality
- Make it more colorful - we took this to mean we should make the user interface more lively. We will take action on it

Potential way forward

With newfound funding, the app aimed at providing learning materials for high school students can undergo transformative enhancements. It will prioritize securing high-quality educational content through partnerships and original creation, ensuring alignment with diverse curricula. Technological improvements will focus on accessibility, including offline features and compatibility across various devices. Localization efforts will cater to diverse languages and learning needs. Strengthened security measures, marketing campaigns, collaborative partnerships, and sustainable financial models will collectively support the app's growth, engagement, and sustained impact in addressing the textbook shortage for high school students.



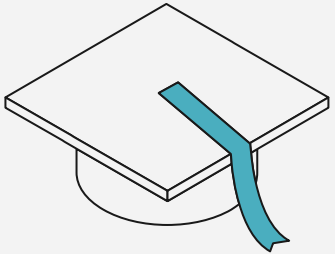


Our Why?

Our Project aims to help students in areas whereby there is not enough supply of school learning materials specifically textbooks to go around. And especially during out of school moments so that the student can continue to learn at their own pleasure.

Impact of our solution

Should this solution be implemented, students will have access to learning materials outside schools and can resume learning and revision at their own pleasure without having to stress about where they can acquire some materials.



THE END
